2001 Vegetable Survey Introduction

In 1990, a biennial survey of Georgia Cooperative Extension Service Agents was implemented. This survey was intended to provide much needed data on vegetable acreage and yields by cultural practice, season and irrigation methods. The survey was designed to be a comprehensive instrument for gathering data on the various vegetable crops grown in Georgia. The collected data is used extensively by the Extension service as well as by agencies and companies that support the vegetable industry in Georgia. In 2000, the vegetable survey was combined with the annual Farm Gate Value Report survey. The Farm Gate survey also relies on agent's reports and attempts to measure value of production, at the farm gate, for a wide range of commodities in Georgia, including row crops, vegetables, fruits and nuts, poultry and eggs, forestry and livestock. The two surveys were a natural match and combining them has enhanced both reports.

The results of the vegetable survey are provided in this paper. In 2001, agents reported a total of 191,419 acres of vegetables grown in Georgia. This includes a wide range of vegetables, from broccoli to watermelons. In fact, over 30 types of vegetables were reported. Roughly 95% of these vegetables are grown for the fresh market with 5% going to processing.

Users of this report will find there are a variety of sources for vegetable acreage, yield, and value. These sources include this report, the Georgia Agricultural Statistics Services and the Census of Agriculture. The first tables of this report show the Georgia Agricultural Statistic Services' vegetable estimates for 2001 and compare them to the Extension results. The Extension results and the Georgia Agricultural Statistic Service results are rarely equal to each other. Reasons for these differences abound and are mostly related to the data collection method. Extension estimates rely only on Cooperative Extension Service County Agents. Estimated yields for the year are available to the Agents if they are unaware of local growing conditions. Extension estimates do not distinguish between planted and harvested acres. We do emphasize to the Agents to report harvested acres. ***The comparisons provided here are not meant to question or to justify the accuracy of either source.*** Users of the data, however, should be aware of these differences. Extension agents reported about twelve percent more total acres than Georgia Agricultural Statistics Service for nine selected crops. Extension estimates ranged from 78% to 221% of Georgia Agricultural Statistic estimates.

During the 2000 to 2001 period, extension agents reported a 3% decrease in vegetable acreage. The fastest acreage growth rates were reported for broccoli (note, however, the total increase was only 4 acres), spinach, and winter squash, as shown in table 3. Crops with the fastest decline rates in acreage include English peas, snap beans and lettuce.

Vegetable acreage is ranked in table 4. Watermelons continue to be the state's largest single vegetable in acreage. Sweet corn moved back into second place. Table 5 breaks the acreage down by market, cultural practice and irrigation practice. Spring, fresh (bareground), irrigated vegetables continue to constitute over half of the total vegetable acres in Georgia. Vegetable yields are shown, along with acres, in further detail in tables 6-8. Yields are a weighted average by acreage.

Values are reported in this report in table 9. Please note again that these estimates may not correspond with Georgia Agricultural Statistics reports. Prices used in Extension estimates do not account for differences in quality and quantity. This will explain some of the value differences as well as the reasons given above. Onions are the highest value generators in Georgia despite watermelons having more acreage. Further break down of values can be found in the 2001 Georgia Farm Gate Value Report published by the Center for Agribusiness and Economic Development.

The final section of this report is for use by the Vegetable Team. It includes a breakdown by county of the acreage and yields for each commodity. The first section gives acreage data and the second yield data.

The Center for Agribusiness & Economic Development

The Center for Agribusiness and Economic Development is a unit of the College of Agricultural and Environmental Sciences of the University of Georgia, combining the missions of research and extension. The Center has among its objectives:

To provide feasibility and other short term studies for current or potential Georgia agribusiness firms and/or emerging food and fiber industries.

To provide agricultural, natural resource, and demographic data for private and public decision makers.

To find out more, visit our Web site at: <http://www.caed.uga.edu>

Or contact:

John McKissick, Director
Center for Agribusiness and Economic Development
Lumpkin House
The University of Georgia
Athens, Georgia 30602-7509
Phone (706)542-0760
caed@agecon.uga.edu

The University of Georgia and Fort Valley State University, and the U.S. Department of Agriculture and counties of the state cooperating. The Cooperative Extension Service offers educational programs, assistance and materials to all people without regard to race, color, national origin, age, sex or disability.

An equal opportunity/affirmative action organization committed to a diverse work force.

SR-02-02

July 2002

Issued in furtherance of Cooperation Extension Acts of May 8 and June 30, 1914, the University of Georgia College of Agricultural and Environmental Sciences, and the U.S. Department of Agriculture cooperating.

J. Scott Angle, Dean and Director
